Power BI DAX Practice Questions

Dataset: Sales | Practice assignment

Dataset structure

Use a Sales table with these columns:

Column	Type
Order_ID	Text
Order_Date	Date
Customer	Text
Product	Text
Category	Text
City	Text
Region	Text
Salesperson	Text
Quantity	Number
Unit_Price	Number
Discount	Number
Cost	Number
Payment_Mode	Text
Rating	Number

Calculated columns to create first

Total Sales = Sales[Quantity] * Sales[Unit_Price]

Discount Amount = Sales[Total Sales] * Sales[Discount]

Final Sales = Sales[Total Sales] - Sales[Discount Amount]

Profit = Sales[Final Sales] - Sales[Cost]

Note: The missing F section was not available in the supplied text. To keep the provided questions together, the Advanced DAX section is labelled F and numbered 42–54, and DAX Challenge is labelled G and numbered 55–65. These are renumbered from the supplied questions, not recovered original wording.

A. Basic DAX Measures

1. Calculate total sales.
2. Calculate total quantity sold.
3. Calculate total profit.
4. Calculate average sales.
5. Calculate average product price.
6. Find the maximum sales value.
7. Find the minimum sales value.
8. Count total orders.

9. Count unique customers.

10. Count unique products.

Expected functions: SUM(), AVERAGE(), MAX(), MIN(), COUNT(), DISTINCTCOUNT()

B. CALCULATE Practice

11. Calculate total sales only for Delhi.

12. Calculate total sales only for Mumbai.

13. Calculate total sales for the Electronics category.

14. Calculate total profit for the Furniture category.

15. Calculate sales for the Online payment mode.

16. Calculate sales for the North region.

17. Calculate sales for customers whose rating is greater than 4.

18. Calculate total sales where quantity is greater than 5.

19. Calculate total profit where discount is less than 20%.

20. Calculate total sales for a particular salesperson.

C. FILTER + CALCULATE

21. Calculate sales for products where sales are greater than ■10,000.

22. Calculate profit from orders where quantity is greater than 10.

23. Calculate sales from customers having rating greater than 4.

24. Calculate sales from Delhi and Mumbai only.

25. Calculate sales where discount is greater than 10%.

26. Calculate total sales for products belonging to Electronics or Furniture.

27. Calculate total profit for orders having Final Sales greater than ■5,000.

D. SUMMARIZE Practice

28. Create a table showing City-wise Total Sales.

29. Create a table showing Category-wise Total Sales.

30. Create a table showing Product-wise Total Quantity.

31. Create a table showing Region-wise Total Profit.

32. Create a table showing Salesperson-wise Total Sales.

33. Create a table showing City | Total Sales | Total Profit.

34. Create a table showing Category | Total Sales | Total Quantity | Total Profit.

35. Create a table showing Salesperson | Sales | Profit | Orders.

E. TOPN Practice

36. Find the Top 5 Products by Sales.

37. Find the Top 3 Cities by Sales.

38. Find the Top 5 Salespersons by Profit.

39. Find the Top 3 Categories by Quantity Sold.

40. Find the Top 10 Customers by Sales.

41. Find the Bottom 5 Products by Sales.

F. Advanced DAX

42. Calculate each product's percentage contribution to total sales.

43. Calculate each city's percentage contribution to total sales.

44. Calculate average order value.

45. Calculate profit margin %.

46. Calculate discount percentage.

47. Find the highest-selling product.

48. Find the highest-profit city.

49. Find the salesperson with maximum sales.

50. Create a measure for Top 5 Product Sales.

51. Create a measure for Top 3 City Sales.

52. Calculate sales excluding the selected category.

53. Calculate sales excluding the selected city.

54. Create a dynamic measure that changes according to the selected category.

G. DAX Challenge Questions

55. Find the Top 3 products in each category.

56. Find the Top 3 cities in each region.

57. Find each salesperson's contribution to total company sales.

58. Calculate cumulative sales by date.

59. Calculate cumulative profit by date.

60. Find products whose sales are above the average product sales.

61. Find cities whose sales are above the average city sales.

62. Calculate the difference between a product's sales and the category's average sales.

63. Calculate the rank of products according to sales.

64. Calculate the rank of salespersons according to profit.

65. Create a measure that displays High Sales for sales > ■1,00,000; Medium Sales for ■50,000–■1,00,000; and Low Sales for sales < ■50,000.
